[Nanorobot Invention and Linux: The Open Technology Factor - An Open Letter to UNO General Secretary](#)

Abstract:

Author - Adriano Cavalcanti: This is an open letter, which discloses an outline on the current status of nanorobotic cutting edge technology trends in software development, bioinformatics, proteomics, nanotechnology, and manufacturing integration. It provides a layman's description of a practical platform to effectively boost the development of nanobiotechnology, and to manufacture nanorobot hardware architecture for medical defense that will benefit humankind. The core description of the present initiative is based on Linux strategies. The basis and key advantages of such an approach are clearly described next.

Nanotechnology should be used for peaceful purposes based on ethical practices to provide a human heritage. The nanorobot invention has an impact on current history and provides a legacy for coming generations.
