Known as nanorobot pioneer, Cavalcanti is the medical nanorobotics inventor for the practical hardware architecture of nanorobots, which was integrated as a model based on nanobioelectronics for applications in environmental monitoring, brain aneurysm, diabetes, cancer and cardiology. His advanced prototype provided a suitable integrated circuit approach, using an effective wireless platform for energy supply with cell phones and satellite, to enable the commercial implementation of nanorobots with long distance teleoperation and data transfer for health care, drug delivery, and laparoscopic nanosurgery.
